Key Topics Covered in the Predicted Paper and Their Solutions

The June 2014 predicted paper encompasses several fundamental areas of statistics.

Understanding these topics, along with their solutions, is vital to mastering exam content.

1. Data Collection and Sampling

Sample Question Example

> A survey was conducted to find out the favorite sport among students in a school. A random sample of 50 students was selected, and their preferred sports recorded. Explain why using a random sample is important.

Predicted Answer

- Using a random sample reduces bias, ensuring that every student has an equal chance of being selected.
- It helps produce a representative sample of the entire student population.
- This improves the reliability and validity of the survey results.
- Random sampling supports generalization of findings to the whole population.

2. Measures of Central Tendency and Variability

Sample Question Example

> The ages of five participants are 20, 22, 24, 26, and 28. Calculate the mean and median ages.

Predicted Answer

- Mean: $(20 + 22 + 24 + 26 + 28) / 5 = 120 / 5 = 24$
- Median: Arrange data in order (20, 22, 24, 26, 28); median is the middle value = 24

3. Probability

Sample Question Example

> A bag contains 3 red balls, 5 blue balls, and 2 green balls. If a ball is drawn at random, what is the probability that it is blue?

Predicted Answer

- Total number of balls = $3 + 5 + 2 = 10$
- Probability (blue) = Number of blue balls / Total balls = $5 / 10 = 1/2$

4. Data Presentation and Interpretation

Sample Question Example

> The table below shows the number of hours studied and corresponding test scores for five students:

| Hours Studied | Test Scores |

|-----|-----|

| 2 | 50 |

| 3 | 55 |

| 4 | 60 |

| 5 | 65 |

| 6 | 70 |

Plot a scatter diagram and interpret the relationship.

Predicted Answer

- Plot each pair of data points on a graph with hours studied on the x-axis and test scores on the y-axis.
- Likely observation: There is a positive correlation; as hours studied increase, test scores tend to increase.
- This suggests a linear relationship between hours studied and performance.
