Macro economics examines the economy as a whole rather than individual markets or sectors. It analyzes aggregate indicators such as gross domestic product (GDP), inflation rates, unemployment levels, and national income to understand the overall economic environment. Its goal is to identify trends and policy impacts that influence economic stability and growth.

Relevance to Business and Accountancy

For accountants and business managers, macroeconomic knowledge helps anticipate economic cycles, understand market conditions, and make informed strategic decisions. It also assists in assessing risks and opportunities linked to economic changes, such as inflation or recession, which can significantly affect financial planning and reporting.

- **GDP and Business Planning:** A growing GDP indicates a healthy economy, encouraging investment and expansion, while a declining GDP may signal recession or slowdown.

Inflation and Deflation

Inflation refers to the rise in the general price level of goods and services, eroding purchasing power. Deflation is the opposite, characterized by falling prices.

- **Causes of Inflation:** Demand-pull inflation, cost-push inflation, and built-in inflation.
