5. Using the Power of a Point Theorem

This theorem relates the lengths of segments created by chords, secants, and tangents intersecting outside or inside a circle.

Sample Questions and Step-by-Step Solutions

Question 1: Find the measure of an inscribed angle

Given a circle with an inscribed angle measuring 40° , find the measure of its intercepted arc.

Solution:

- Recall that the measure of an inscribed angle is half the measure of its intercepted arc.
- Set up the equation: **angle measure** = $\frac{1}{2} \times$ **arc measure**.
- Substitute the given value: $40^\circ = \frac{1}{2} \times$ arc measure.
- Multiply both sides by 2: arc measure = 80° .
- Answer: The intercepted arc measures 80° .

Question 2: Find the length of a chord given its distance from the center

A circle has a radius of 10 units, and a chord is 6 units away from the center. Find the length of the chord.

Solution:

- Draw the radius from the center to the midpoint of the chord, forming a right triangle with half the chord length and the distance from the center.
- Use the Pythagorean theorem: **half chord length** = $\sqrt{(\text{radius}^2 - \text{distance}^2)} = \sqrt{(10^2 - 6^2)} = \sqrt{(100 - 36)} = \sqrt{64} = 8$.
- The full chord length is twice the half: $2 \times 8 = 16$ units.

- Answer: The chord length is 16 units.

Question 3: Applying the Power of a Point theorem

Two secants intersect outside a circle, with segments measuring 3 units and 7 units on one secant and 4 units and x units on the other. Find x .

Solution:

- Recall the Power of a Point formula: **external segment $\times$ entire secant** are equal for both secants.
- Set up the equation: $3 \times 10 = 4 \times (x + 4)$.
- Solve for x : $30 = 4(x + 4) \Rightarrow 30 = 4x + 16$.
- Subtract 16 from both sides: $14 = 4x$.
- Divide both sides by 4: $x = 3.5$.
- Answer: x equals 3.5 units.
