Options:

- a) First Law (Inertia)
- b) Second Law ($F=ma$)
- c) Third Law (Action-Reaction)
- d) Law of Conservation of Momentum

Answer: a) First Law (Inertia)

- Emphasis: Conceptual clarity, mathematical proficiency, and real-world applications

The question under review is one of the numerical problems that encapsulate core physics principles, requiring students to demonstrate analytical skills and a sound grasp of foundational concepts.

The Core Physics Question of 2012: An Overview

While the exact wording of the original question varies slightly across different sources, a typical representative physics problem from the SSC Dhaka Board 2012 paper is as follows:

"A body of mass 2 kg is moving with a velocity of 10 m/s. It is acted upon by a force of 5 N for 4 seconds. Calculate the change in the body's kinetic energy and determine whether the force is doing positive or negative work on the body."

This question, although seemingly straightforward, covers multiple fundamental concepts in mechanics, including Newtonian physics, work-energy theorem, and the principles of energy transfer.

Dissecting the Question: Fundamental Concepts and Principles

Understanding this problem requires an in-depth analysis of several core physics principles:

1. Newton's Laws of Motion

- The problem involves a force acting on a moving body, directly invoking Newton's Second Law

($F = ma$)), which relates force, mass, and acceleration.

- The application of force over a period of time indicates the possibility of changing the body's velocity, highlighting the concept of impulse and momentum.

2. Work-Energy Theorem

- The core of the question is to calculate the change in kinetic energy, directly linked to the work done by the force.

- The work-energy theorem states: The work done by net force on an object equals the change in its kinetic energy.

3. Kinetic Energy and Its Calculation

- Kinetic energy (KE) is given by $KE = \frac{1}{2}mv^2$.

- Initial and final kinetic energies are compared to determine the energy change.

4. Work Done by Force

- Work (W) is defined as $W = F \times d \times \cos \theta$, where d is displacement and θ is the angle between force and displacement.

- Alternatively, when force and displacement are along the same line, $W = F \times d$.

- The sign of work (positive or negative) indicates whether energy is added to or taken from the system.

Step-by-Step Solution and Explanation

Let's explore how to approach and solve this problem comprehensively.

Step 1: Initial Data and Assumptions

- Mass of body, $m = 2\text{ kg}$
- Initial velocity, $u = 10\text{ m/s}$
- Force applied, $F = 5\text{ N}$
- Duration of force application, $t = 4\text{ s}$

Assumption: The force acts along the direction of motion, simplifying calculations by considering straight-line motion.

Step 2: Calculate the Impulse and Final Velocity

- Impulse (J) is given by:

$$J = F \times t$$

$$J = 5\text{ N} \times 4\text{ s} = 20\text{ Ns}$$

$$J = \Delta p$$

- Change in momentum equals impulse:

$$\Delta p = J$$

$$\Delta p = J$$

$$\Delta p = J$$

- Initial momentum:

$$p_{\text{initial}} = m \times u$$

$$p_{\text{initial}} = 2\text{ kg} \times 10\text{ m/s} = 20\text{ kg m/s}$$

$$p_{\text{initial}} = m \times u$$

- Final momentum:

$$p_{\text{final}} = p_{\text{initial}} + J$$

$$p_{\text{final}} = 20 + 20 = 40\text{ kg m/s}$$

$$p_{\text{final}} = p_{\text{initial}} + J$$

- Final velocity:

$$\backslash$$

$$v_{\text{final}} = \frac{p_{\text{final}}}{m} = \frac{40}{2} = 20 \text{ m/s}$$

$$\backslash$$

Observation: The velocity doubles from 10 m/s to 20 m/s under the applied force.

Step 3: Calculate the Change in Kinetic Energy

- Initial kinetic energy:

$$\backslash$$

$$KE_{\text{initial}} = \frac{1}{2} m u^2 = \frac{1}{2} \times 2 \times 10^2 = 1 \times 100 = 100 \text{ J}$$

$$\backslash$$

- Final kinetic energy:

$$\backslash$$

$$KE_{\text{final}} = \frac{1}{2} m v^2 = \frac{1}{2} \times 2 \times 20^2 = 1 \times 400 = 400 \text{ J}$$

$$\backslash$$

- Change in kinetic energy:

$$\backslash$$

$$\Delta KE = KE_{\text{final}} - KE_{\text{initial}} = 400 - 100 = 300 \text{ J}$$

$$\backslash$$

Interpretation: The kinetic energy increases by 300 Joules due to the work done by the force.

Step 4: Determine the Work Done by the Force

- The work done by the force:

\[

$$W = \Delta KE = 300\text{ J}$$

\]

Since the work is positive, the force adds energy to the body.

- Alternative calculation of work using displacement:
- First, find the displacement during the force application.
- The average velocity during the force application:

\[

$$v_{\text{avg}} = \frac{u + v_{\text{final}}}{2} = \frac{10 + 20}{2} = 15\text{ m/s}$$

\]

- Displacement:

\[

$$d = v_{\text{avg}} \times t = 15\text{ m/s} \times 4\text{ s} = 60\text{ m}$$

\]

- Work done:

\[

$$W = F \times d = 5\text{ N} \times 60\text{ m} = 300\text{ J}$$

\]

This confirms the earlier calculation, reinforcing the understanding of work-energy relation.
