- **Natural Selection:** Differential survival and reproduction based on genetic traits lead to adaptation and evolution.
- **Genetic Drift:** Random fluctuations in allele frequencies, especially in small populations, influence evolutionary outcomes.
- **Gene Flow:** Movement of genes between populations can introduce new genetic material, affecting evolutionary trajectories.
- **Speciation:** The process by which new species arise, often through reproductive isolation mechanisms.

Evolutionary Mechanisms Described by Futuyma

Futuyma's work covers various mechanisms that facilitate evolution:

- **Mutation:** The source of new genetic variation.
- **Selection:** Both natural and artificial, shaping traits over time.
- **Gene flow:** The transfer of genes across populations.
